Food Insecurity

The sheer volume of food lost or wasted per year is approximately enough to end world hunger four times over

According to the FAO, the UNEP and Project Drawdown, the amount of food wasted or lost per year (globally) is 1.3bn in tons, which is worth US\$2.6trn, and represents 8-10% of greenhouse-gas (GHG) emissions.

Around 660 million people may still face hunger in 2030, in part due to lasting effects of the COVID-19 pandemic on global food security.

Promote industry efforts and share best practices of GCCA members and customers to reduce food waste and ensure food security on a global level
