

# National Heavy Vehicle<sub>s</sub> Regulator

*Our Journey to a National Approach*

Sal Petrocchio OAM  
Chief Executive Officer

## Our purpose

“

To enable safe and efficient heavy vehicle movements for the benefit of all.

”

## Becoming a national regulator

- Working closely with states and territories to transition delivery of frontline heavy vehicle regulatory services.
- Achieving the NHVR's mandate to be the single, national regulator for heavy vehicles in Australia.
- Transition program commenced in 2016, with the first phase beginning in South Australia.
- Planned for completion early 2024, with transition of services in Queensland.

## Inform, educate and enforce

- We seek to influence safety in the industry by identifying high risk, unsafe behaviours and deterring non-compliance.
- We do this by informing, educating, monitoring and enforcing the Heavy Vehicle National Law (HVNL).
- At the NHVR, a strong focus is placed on educating heavy vehicle drivers and operators.
- Fatigue is one of the leading factors that affects safety and heavy vehicle crashes. We ensure to dedicate time to educating industry on fatigue management and requirements.

## Leading the way with data science

- We have matured our data capabilities by building several algorithm engines and risk profiles.
- Algorithm engines identify mechanical, fatigue, access, mass, and crash risks.
- They establish profiles of high-risk operators, vehicles, drivers, the supply chain and infrastructure.
- Our latest crash engine tool incorporates multiple data sources to make predictions on a heavy vehicle crash risk.

# Risk assessment and management

**Vehicles**

**Drivers  
(Paused)**

**Supply Chain**

**Operators**

**Infrastructure**

# Early Warning Systems and Predictive Analytics

- Early Warning Systems (EWS) are designed to detect and signal the emergence of potential risks or adverse events at an early stage.
- By analysing the data and applying predefined algorithms or thresholds, EWS can generate alerts or notifications to notify relevant stakeholders.
- Predictive Analytics involves the use of statistical modeling, machine learning algorithms, and historical data to forecast future outcomes or behaviors.
- By analysing patterns and relationships within the data, predictive analytics aims to predict the likelihood of specific events or risks occurring.

## What are the benefits?

- Proactive Risk Management
- Timely Decision-Making
- Resource Optimisation
- Improved Efficiency
- Evidence-Based Decision-Making

## Sightings camera network

### Existing NSCN locations

#### Fixed ANPR Camera Network

- The National Safety Camera Network (NSCN) comprises 221 fixed camera locations
- Provides a rich data source that allows for high-risk journey identification
- Insights into heavy vehicle journeys
- Complimentary to NHVR mobile camera assets

#### Mobile ANPR Camera Trial

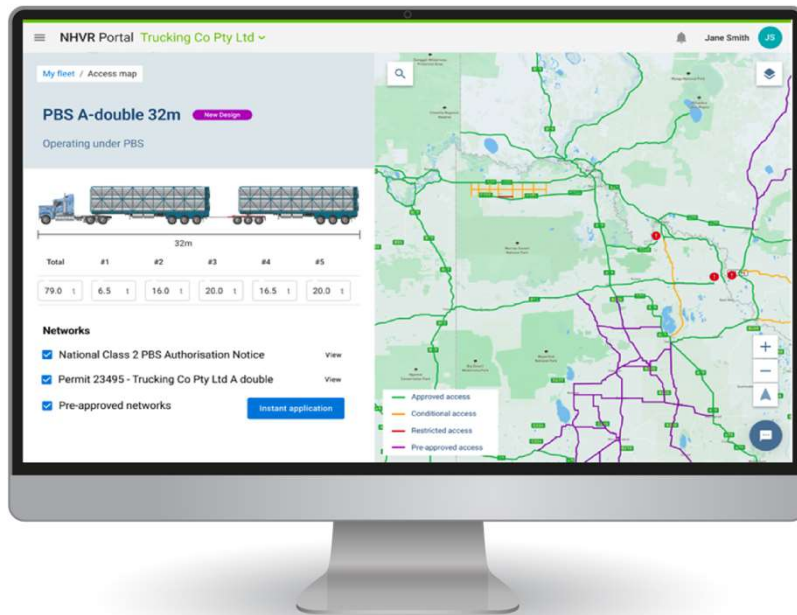

- NHVR analysis identified a potential gap was a lack of visibility of vehicle movements and an inability to target intercepts of high-risk heavy vehicles based on available camera data
- To reduce this gap, the NHVR sought funding from the Heavy Vehicle Safety Initiative (HVSII) to conduct a trial of mobile cameras to determine their effectiveness in identifying and addressing safety risks

## The future of compliance as a modern regulator

- Our Regulatory Compliance Mobility Solution (RCMS), is our proprietary, cloud-based mobile application used by our Safety and Compliance Officers (SCOs).
- SCOs have access to driver and vehicle information, can target high-risk offenders, administer digital notices, and send intelligence data back to the database.
- SCOs can obtain information like mass and dimension, loading, fatigue, vehicle standards, roads and traffic, permits and performance-based standards.
- By using RCMS, our officers are saving approximately 15 minutes per intercept.

## Delivering services online

- The portal is our digital platform that transforms the way we deliver our services.
- It is the heavy vehicle business centre.
- The aim of the portal is to improve accuracy, consistency and timeliness of route planning for industry.
- Currently in the process of transitioning heavy vehicle network maps from all HVNL states & territories to the portal.
- Heavy vehicle industry will have one designated place, encompassing all information needed to plan routes for their entire fleet.

## Spreading the message of road safety

**ALL  
WE NEED  
TO KEEP  
YOU SAFE**  
**SPACE**

- 'We ALL Need Space' provides simple tips for road users, on how to share Australian roads safely with trucks.
- The campaign features the faces of celebrities – so far we have welcomed popular comedian Jimmy Rees, WA truck driver Glenn 'Yogi' Kendall, country music star James Blundell and SA truck driver Casuarina Smith.
- Don't #uck With A Truck targets our youngest road users, to raise awareness of the risks of driving around trucks.
- The campaign attempts to close in on a knowledge gap within this age cohort and develop positive long-term behaviours.

# Thank you
